

SEE DATA CLEARLY

**THE TOOLS YOU NEED
TO TURN INFORMATION
INTO ACTION**

iVIEW Library

Enhance your Qlik experience with iVIEW Library, a unique toolkit seamlessly integrated with Qlik that addresses various challenges:

- Simplify Qlik Content Management across different Qlik environments and Cloud tenants.
- Manage Apps, Master Items, and KPIs, including dependency and app compatibility checks.
- Support migration for QlikView, to Qlik Sense, to Qlik Cloud.
- Optimize self-service analysis.

MAKE SURE YOUR KPIS ARE MEASURABLE, ACTIONABLE AND VISUALLY UNDERSTANDABLE.

Whether you're just starting your data journey or looking to scale your QLIK project, iVIEW Library offers:

- A central access point for QLIK, including business rules, KPI definitions, and calculations.
- Ensures clear, standardized project KPIs, preventing data model issues and delays.
- Streamlines master data management as a standalone web application for Qlik.

iVIEW Library is part of the iVIEW Automation Framework product family. Visit our website iview.io to learn more and set the standard for data governance in your Qlik environment.

Key features:

- Central access to business rules, KPIs, and calculations.
- Global search for identifying business KPIs.
- Real-time merging of master definitions across apps.
- Easy customization for business users.
- Web-based Master Data Management.
- Full automation.
- Compatibility with Qlik Sense and Qlik Cloud environments.
- Migration support.
- Self-service analysis optimization.
- Simplified Data Governance.

LEVEL UP YOUR DATA CAPABILITIES TO BUILD A DATA CULTURE WITHIN YOUR BUSINESS

SEE DATA CLEARLY WITH

Data Automation Framework

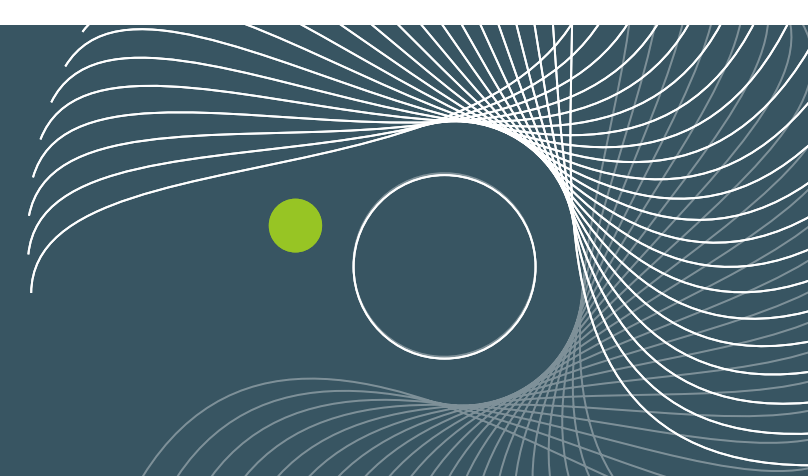

For business leaders who understand the value of building a modern data driven organization, and having these capabilities on hand and in-house, the iVIEW Data Automation Framework is a QLIK-integrated toolkit, which allows you to easily scale your current BI solution and create data capability within your business by:

- a Removing the complexity of code,**
- b Mastering the management of the KPI's needed for analysis, and**
- c Empowering business users to visualize their data, their way.**

Introducing the iVIEW Data Automation Framework

with iVIEW Library, iVIEW Dataflow and iVIEW Designer.
To find out more about our iVIEW products and to see data clearly, visit our website today.

iVIEW Dataflow

Responsible for Data Integration.

Is a workflow automation engine for data integration and management (ETL).

Focusses on the process from data extraction through to modelling.

iVIEW Library

Responsible for Data Governance.

Needed for the central management of KPIs, master data and content definitions that are needed for any analysis.

Master KPI management.

iVIEW Designer

Responsible for Data Visualisation.

Designer is a "guided" Content Management System (CMS) that allows Qlik Sense users a flexible and consistent experience when creating their own web solution.

A simpler, guided way to show data.
